Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: US 5 112 576 A

D2: US 4 623 446 A

D3: US 4 973 452 A

1. Novelty (yes)

The apparatus according to the invention differs from the apparatus disclosed in the prior art in that the gas outlet conduit of the primary cyclone does not protrude from the cover into the cyclone. This feature is not disclosed in the documents cited in the search report.

The subject-matter of claims 1-13 is novel over the prior art cited in the search report.

2. Inventive step (yes)

The technical problem is to improve the separation efficiency of the catalyst in a process for the separation and stripping of a mixture of fluid catalytic cracking catalyst in a fluid catalytic cracking process (page 4, lines 15-19 as originally filed).

The comparative examples show that the proposed modification of the gas outlet conduit configuration in the primary cyclone solves this problem. The separation efficiency is improved and the pressure drop is reduced by comparison with primary cyclone in which the gas outlet conduit protrudes into the inner of the cyclone.

Consequently, the subject-matter of claims 1-13 seems to involve an inventive step over the disclosure of the documents cited in the search report.
